## DETAILED ACTION

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-33, and 59, are drawn to a composition comprising *ex vivo* expanded cells, classified in class 424, subclass 93.71.
  - II. Claims 34-44, 52-58, are drawn to a method of treating patients suffering from cancer, classified in class 424, subclass 93.1.
  - III. Claims 45-47, are drawn to a method of preparing a composition comprising *ex vivo* expanded cells, classified in class 435, subclass 325.
  - IV. Claims 48-51, are drawn to a method of *ex vivo* expansion of EAT cells, classified in class 435, subclass 420.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to materially distinct methods, that have different outcomes, functions, and effects. The invention of group II is drawn to a method of treatment, while the invention of group III is drawn to a method of preparing a composition, while the invention of group IV is drawn to a method of *ex vivo* expansion of cells. All of these methods are directed to divergent subject matters, and thus not related.

Art Unit: 1642

3. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process of treating a patient suffering from cancer can be accomplished using other material other than the composition claimed in group I. For example, an isolated protein, that is produced by the cells of group I could be used treat patient suffering from cancer.

4. Inventions I and III-IV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process of preparing a composition of cells could be used to prepare a composition for treating other diseases, such as HIV. The process of *ex vivo* expansion of cell could be used to produce original cell lines for *in vitro* studies. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 1642

5. A telephone call was made to Anita Meiklejohn on March 19, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
